Who we are

Basler & Hofmann is an independent engineering, planning and consultancy company. We provide groundbreaking solutions for a densely built-up and developed world. Construction, mobility, energy, safety and the environment - Basler & Hofmann works for its clients in all these areas. We offer consultancy, planning and engineering services.

Holistic solutions

In today's complex world, few engineering challenges can be handled by a single expert. Basler & Hofmann employs specialists from more than 30 disciplines. Basler & Hofmann provides a bespoke team for each project. This team consists of people with the complete range of expertise and skills required to provide the best possible service. Should new requirements in the project arise, the necessary expertise is always available.

From planning to implementation

We guide our clients through all phases of their project: We offer our advice and expertise. We plan and carry out feasibility studies. We design projects and also manage them. Depending on the client's needs, we carry out a variety of tasks. We take on the overall management of the project, offer consultancy services, provide technical experts and manage the construction process. Whatever we

do, we always see the big picture – and we have an eye for detail.

The importance of being able to manage processes well

A good solution can be defined not just by the outcome but by the actual process. We have to take account of a whole range of needs and concerns in many of the projects we undertake. We believe it is very important for our project managers to have a broad range of expertise. Efficient process management is important – at least as important as being able to listen and lead through collaboration.

Innovative in a traditional sense

We are quick to take on new demands for the work we do – whether they are of a technical, environmental or social nature. Since the company's formation in 1963 we have continually expanded our expertise. We work closely with experts worldwide and offer our clients solutions that incorporate the very latest thinking.
